Guide To Neural Computing Applications:

Guide to Neural Computing Applications Lionel Tarassenko, 1998-01-30 Neural networks have shown enormous potential for commercial exploitation over the last few years but it is easy to overestimate their capabilities A few simple algorithms will learn relationships between cause and effect or organise large volumes of data into orderly and informative patterns but they cannot solve every problem and consequently their application must be chosen carefully and appropriately This book outlines how best to make use of neural networks It enables newcomers to the technology to construct robust and meaningful non linear models and classifiers and benefits the more experienced practitioner who through over familiarity might otherwise be inclined to jump to unwarranted conclusions The book is an invaluable resource not only for those in industry who are interested in neural computing solutions but also for final year undergraduates or graduate students who are working on neural computing projects It provides advice which will help make the best use of the growing number of commercial and public domain neural network software products freeing the specialist from dependence upon external consultants

Handbook of Neural Computing Applications Alianna J. Maren, Craig T. Harston, Robert M. Pap, 2014-05-10 Handbook of Neural Computing Applications is a collection of articles that deals with neural networks Some papers review the biology of neural networks their type and function structure dynamics and learning and compare a back propagating perceptron with a Boltzmann machine or a Hopfield network with a Brain State in a Box network Other papers deal with specific neural network types and also on selecting configuring and implementing neural networks Other papers address specific applications including neurocontrol for the benefit of control engineers and for neural networks researchers Other applications involve signal processing spatio temporal pattern recognition medical diagnoses fault diagnoses robotics business data communications data compression and adaptive man machine systems One paper describes data compression and dimensionality reduction methods that have characteristics such as high compression ratios to facilitate data storage strong discrimination of novel data from baseline rapid operation for software and hardware as well as the ability to recognized loss of data during compression or reconstruction The collection can prove helpful for programmers computer engineers computer technicians and computer instructors dealing with many aspects of computers related to programming hardware interface networking engineering or design
