Gaining Ground:

Gaining Ground? Deborah James, 2007-03-12 Mugabe's policy of land seizures in Zimbabwe raised concerns in South Africa. Set amidst these conflicts, *Gaining Ground* shows how land reform policy and practice in post-apartheid South Africa has been produced and contested. Winner of the inaugural Elliott P. Skinner Book Award of the Association of Africanist Anthropology, 2008.

Gaining Ground Clifford Winston, 2021-08-17 Focusing on ways that markets work with rather than against governments to enhance public welfare, the optimal mix of market forces and government intervention to allocate resources is one of the longest standing problems facing human civilization. At the theoretical extremes, resources in centrally planned economies are allocated by the government while resources in capitalist economies are allocated by private markets. In practice, market forces and government interventions co-exist to allocate goods and services in a political environment with shifting pressures to give one approach more responsibility than the other. Current public attitudes toward markets are at a low point in the wake of the Great Recession and the growth in income inequality that began in the 1970s. However, in this book, noted Brookings economist Clifford Winston argues that it is a serious mistake to overlook that markets will be a critical part of the solution to any public objective, whether it be to reduce inequality, stimulate long-term growth, slow climate change, or eliminate COVID-19. In Winston's view, policymakers should be much more aware of the many ways that markets help government to achieve economic and social goals and the potential that markets have to provide greater assistance in achieving those goals. Winston synthesizes the empirical evidence on the efficacy of markets in helping to protect consumers against anti-competitive behavior and when technology appears to prevent price competition to enable individuals to make more informed decisions and to reduce negative externalities, improve public production, and encourage innovations. Importantly, Winston presents evidence indicating how markets can also help to reduce poverty, promote fairness in labor markets, and provide merit goods. Winston subjects his assessment to a robustness test by explaining how market forces have helped to address the COVID-19 pandemic, for example, by finding new ways for people to work safely and providing incentives for pharmaceutical companies to develop safe and effective vaccines. Winston takes a proactive approach in his conclusion by suggesting the formation of a major Commission composed of academics, policymakers, and businesspeople. Such a panel could explore how market forces could provide greater help to government to address economic and social problems and could provide specific recommendations to facilitate market solutions where appropriate.

Jennifer A. Clack, 2012-06-27 Around 370 million years ago, a distant relative of a modern lungfish began a most extraordinary adventure, emerging from the water and laying claim to the land. Over the next 70 million years, this tentative beachhead had developed into a worldwide colonization by ever-increasing varieties of four-limbed creatures known as tetrapods, the ancestors of all vertebrate life on land. This new edition of Jennifer A. Clack's groundbreaking book tells the complex story of their emergence and evolution. Beginning with their closest relatives, the lobe-fin fishes such as lungfishes and coelacanths,
