Efficient Algorithms For Listing Combinatorial Structures:

Efficient Algorithms for Listing Combinatorial Structures Leslie Ann Goldberg, 1993-04-22 This thesis is concerned with the design of efficient algorithms for listing combinatorial structures The research described here gives some answers to the following questions which families of combinatorial structures have fast computer algorithms for listing their members What general methods are useful for listing combinatorial structures How can these be applied to those families that are of interest to theoretical computer scientists and combinatorialists Among those families considered are unlabeled graphs first order one properties Hamiltonian graphs graphs with cliques of specified order and k colorable graphs Some related work is also included that compares the listing problem with the difficulty of solving the existence problem the construction problem the random sampling problem and the counting problem In particular the difficulty of evaluating Polya s cycle polynomial is demonstrated

Ying,2010-07-26 Annotation This book constitutes the refereed proceedings of the 4th International Frontiers of Algorithmics Workshop FAW 2010 held in Wuhan China in August 2010 The 28 revised full papers presented together with the abstracts of 3 invited talks were carefully reviewed and selected from 57 submissions The Workshop will provide a focused forum on current trends of research on algorithms discrete structures and their applications and will bring together international experts at the research frontiers in these areas to exchange ideas and to present significant new results The mission of the Workshop is to stimulate the various fields for which algorithmics can become a crucial enabler and to strengthen the ties between the Eastern and Western research communities of algorithmics and applications

Surveys in Combinatorics, 2001 James William Peter Hirschfeld,2001 The British Combinatorial Conference is held every two years and is now a key event for mathematicians worldwide working in combinatorics This volume is published on the occasion of the 18th meeting which was held 1st 6th July 2001 at the University of Sussex The papers contained here are surveys contributed by the invited speakers and are thus of a quality befitting the event There is also a tribute to Crispin Nash Williams past chairman of the British Combinatorial Committee The diversity of the subjects covered means that this will be a valuable reference for researchers in combinatorics However graduate students will also find much here that could be of use for stimulating future research

Graph-Theoretic Concepts in Computer Science Juraj Hromkovič,Manfred Nagl,Bernhard Westfechtel,2005-01-25 During its 30 year existence the International Workshop on Graph Theoretic Concepts in Computer Science has become a distinguished and high quality computer science event The workshop aims at uniting theory and practice by demonstrating how graph theoretic concepts can successfully be applied to various areas of computer science and by exposing new theories emerging from applications In this way WG provides a common ground for the exchange of information among people dealing with several graph problems and working in various disciplines Thereby the workshop contributes to forming an interdisciplinary research community The original idea of the Workshop on Graph Theoretic Concepts in Computer Science was ingenuity in all theoretical aspects and applications of graph concepts wherever applied Within the last ten years the development has strengthened in particular the topic of structural graph properties in relation to computational complexity This workshop has become pivotal for the community interested in these areas An aim specific to the 30thWG was to support the central role of WG in both of the prementioned areas on the one hand and on the other hand to promote its originally broader scope The 30th WG was held at the Physikzentrum Bad Honnef which serves as the main meeting point of the German Physical Society It offers a secluded setting for research conferences seminars and workshops and has proved to be especially stimulating for fruitful discussions Talks were given in the new lecture hall with a modern double rear projection interactive electronic board and full video conferencing equipment

in mathematics galois cohomology is the study of the group cohomology of galois modules that is the application of homological algebra to modules for galois groups a galois group G associated to a field extension L/K acts in a natural way on some abelian groups for example those constructed directly from L but also through other galois representations that may be derived by more abstract means galois cohomology accounts for the way in which taking galois invariant elements fails
