Finite Spectrum Abignment For Timedelay Systems:

Finite-Spectrum Assignment for Time-Delay Systems Qing-Guo Wang, Tong H. Lee, Kok K. Tan, 1998-09-25 The presence of considerable time delays in many industrial processes is well recognized and achievable performances of conventional unity feedback control systems are degraded if a process has a relatively large time delay compared to its time constants In this case dead time compensation is necessary in order to enhance the performances The most popular scheme for such compensation is the Smith Predictor but it is unsuitable for unstable or lightly damped processes because the compensated closed loop system always contains the process poles themselves An alternative scheme for delay elimination from the closed loop is the finite spectrum assignment FSA strategy and it can arbitrarily assign the closed loop spectrum One may note that the Smith Predictor Control can be found in delay systems control books and many process control books but the FSA control is rarely included in these books It is therefore timely and desirable to fill this gap by writing a book which gives a comprehensive treatment of the FSA approach This is useful and worthwhile since the FSA provides not only an alternative way but also certain advantages over the Smith Predictor The book presents the state of the art of the finite spectrum assignment for time delay systems in frequency domain It mainly contains those works carried out recently by the authors in this field Most of them have been published and others are awaiting publication They are assembled together and reorganized in such a way that the presentation is logical smooth and systematic

Advances in Time-Delay Systems

Silviu-Iulian Niculescu, Keqin Gu, 2012-12-06 In the mathematical description of a physical or biological process it is a common practice to assume that the future behavior of the process considered depends only on the present state and therefore can be described by a finite set of ordinary differential equations This is satisfactory for a large class of practical systems However the existence of time delay elements such as material or information transport of time renders such description unsatisfactory in accounting for important behaviors of many practical systems Indeed due largely to the current lack of effective methodology for analysis and control design for such systems the time delay elements are often either neglected or poorly approximated which frequently results in analysis and simulation of insufficient accuracy which in turn leads to poor performance of the systems designed Indeed it has been demonstrated in the area of automatic control that a relatively small delay may lead to instability or significantly deteriorated performances for the corresponding closed loop systems

Robust Control of Time-delay Systems Qing-Chang Zhong, 2006-05-28 Recently there have been significant developments in robust control of time delay systems This volume presents a systematic treatment of robust control for such systems in the frequency domain The emphasis is on systems with a single input or output delay although the delay free part of the plant can be multi input multi output in which case the delays in different channels should be the same The author covers the whole range of H infinity control of time delay systems from controller parameterization implementation from the Nehari problem to the four block problem from theoretical developments to practical issues The major tools used are similarity transformation the chain scattering approach and J spectral factorization Self contained Robust Control of Time delay Systems will interest control theorists and mathematicians working with time delay systems Its methodical approach will be of value to graduates studying general robust control theory or its applications in time delay systems

Linear Time Delay Systems 1998 J.-M. Dion, Luc Dugard, Michel Fliess, 1999-01-20 There exists today an increasing interest in the study of time delay systems because delayed systems are encountered frequently in practice and time delays are often a source of instability The first workshop in this rapidly growing field of time delay systems was organized by the Laboratoire d'Automatique de Grenoble France and sponsored by the IFAC Technical Committee on Linear Systems The 50 participants had the possibility to attend 4 plenary sessions and 2 invited sessions as well as 30 contributed papers selected from 40 submitted papers coming from 17 countries The technical papers arranged in 11 sessions covered the field of linear time delay systems including algebraic and structural properties stability analysis stabilization Hinf control robust stabilization and some applications

Stability, Control and Application of Time-Delay Systems Qingbin Gao, Hamid Reza Karimi, 2019-06-27 Stability Control and Application of Time Delay Systems gives a systematic description of these systems It includes adequate designs of integrated modeling and control and frequency characterizations Common themes revolve around creating certain synergies of modeling analysis control computing and applications of time delay systems that achieve robust stability while retaining desired performance quality The book provides innovative insights into the state of the art of time delay systems in both theory and practical aspects It has been edited with an emphasis on presenting constructive theoretical and practical methodological approaches and techniques Unifies existing and emerging concepts concerning time
