

Guide to Clinical Preventive Services, *continued*

REPORT OF THE US PREVENTIVE SERVICES TASK FORCE

The evidence is incontrovertible that the majority of deaths of Americans younger than 65 years are preventable. Osteopathic physicians, through training and practice, have understood the importance of preventive interventions in screening and in patient counseling. However, until now no authoritative guidelines have been available for a broadly applied strategy. The recent publication of the US Preventive Services Task Force's *Guide to Clinical Preventive Services* is an answer that fills the void. It provides recommendations on more than 100 interventions for 60 potentially preventable diseases and conditions. The *Guide* is the result of more than 4 years of intensive and exhaustive efforts by a panel of 20 nonfederal experts. This panel included 14 physicians appointed in 1984 by Assistant Secretary for Health Edward N. Brandt, Jr, MD, PhD.

The Task Force evaluated (1) the burden of suffering of the condition, including morbidity, mortality, years of life lost, cost of treatment, and impact on society, and (2) the proved effectiveness of intervention according to the quality of published research evidence, including risks and benefits, the sensitivity, specificity, and predictive value of screening tests, and the effects of simplicity, cost, and acceptability on patient compliance. The result is a document that guides the practicing physician in preventive interventions and describes exactly how and when to implement these interventions for optimal results. No longer will the routine "annual physical" be adequate. Rather, a selective periodic health examination tailored to individual risks, with screening tests chosen on the basis of the unique risk profile of the individual patient, will be the standard. Physicians and patients together, through education and counseling, will address preventive interventions, and patients will assume a greater responsibility for their own health.

As a service to osteopathic physicians, *The Journal of the American Osteopathic Association* is reprinting the "periodic health examination: age-specific charts," that appear in the *Guide to Clinical Preventive Services*. These charts describe the content of the periodic health examination for patients in different age groups. The charts contained in this month's issue are for patients aged 19 through 39 (Table 5), 40 through 64 (Table 6), 65 and over (Table 7), and for pregnant women (Table 8). The charts for patients from birth to 18 months (Table 1), ages 2 to 6 (Table 2), ages 7 to 12 (Table 3), and ages 13 to 18 (Table 4) were reprinted in the March issue of *JAOA* (1991;91:281-289).

The Task Force cautions that the tables are not intended to be a complete list for all preventive services that should be offered during the periodic health examination, but cover only those preventive services that have been examined in the report and that have been shown to have satisfactory evidence of clinical effectiveness. Each chart includes screening procedures, counseling interventions, and immunizations and chemoprophylaxis. High-risk categories are specifically identified.

The complete *Guide to Clinical Preventive Services: The Assessment of the Effectiveness of 169 Interventions* is published by Williams & Wilkins, Baltimore, Md.

We hope that you will find the following material useful and that you will cut it out and keep it accessible in your office as a resource and guide.
