On December 17, 1903, Orville Wright succeeded in flying the first free, controlled flight of a power-driven, heavier-than-air plane. Later that day his brother Wilbur piloted their Wright Flyer in their longest flight of the day, a sortie lasting for 58 seconds and traversing a distance of 852 feet. It was an extraordinary achievement.

First Army, America, 1918

American military aviation began in 1907, when the Department of War (Army) issued an order on 3 August, which read:

The Administrative Division of this office is hereby established to take effect this date. The Division will have charge of all matters pertaining to military ballooning, air machines, and all kindred subjects. All data on hand will be carefully classified and perfected for future experiments. The operations of this Division are strictly confidential. . . .

The active strength of the Administrative Division in 1907 was 3 personnel.

The Air Central Workers selected by this memorial are children, parents, and siblings—patriots of every color, creed, identity, and origin. There is a story of skill and valor, service and sacrifice—and the story of the citizens

who gave them the tools and created the airpower they employed. American scientists, engineers, businessmen and craftsmen dreamed and labored to build the machines they flew. Women pilots delivered combat aircraft to theaters of war before they became air warriors in their own right; and from countless airstrips across America, many Airmen raised valiantly to train the pilots and aircrew members the nation has sent into war. Over decades, across the globe, millions of enlisted and officer Airmen have built and run the bases, loaded the weapons, and repaired and refueled the planes that Air Force veterans flew. Perhaps most of all, this memorial is also the story of every American who supported their Air Force and made it the most formidable air armada the world has ever seen.

Farquhar,2023 Kick the tires and light the fires this popular lighthearted phrase from a generation ago captures joyful enthusiasm and excitement and echoes when flying was fun missions were thrilling and airmen were rarin to go at least sometimes This book serves as an introduction to American airpower studies and a textbook for exploring the foundations of today s United States Air Force It seeks to build identity through an overview of Air Force heritage and an explanation of the concepts behind current theory and doctrine The overview hopes to balance brevity with thoroughness and introduce the people events technology and ideas associated with American airpower It recognizes domestic and international contributions acknowledging not only the US Army Air Service Air Corps Air Forces and the US Navy s Aeronautical Bureau but also the influence of British French Italian German and Soviet air forces and international air theorists *Foundations of American Airpower* stresses the relationship between airpower and strategy Renowned air historian Phillip S Meilinger says it best Air Power is an inherently strategic force A primary theme of this work emphasizes that airpower is a strategic tool for policy makers but does not replace the need for sound comprehensive strategy Airpower is not a silver bullet that will magically solve problems it is an instrument of strategy

**Foundations of Air Power** ,2012-03-01      *Air and Space Power - Securing the Foundations* ,1997 Doctrine describes and prescribes how we intend to develop organize train and employ our military force to accomplish objectives This paper proposes that air and space power is misunderstood by civilian and military leaders because our shared understanding of the nature of warfare and the purposes of military power is essentially unchanged from Napoleonic concepts of warfare In turn air and space power doctrine an expression of how the mediums can be used to achieve military objectives is stuck in this outdated paradigm Through the use of an analytic framework for doctrine that contrasts its characteristics with underlying assumptions a sequence of flaws in fundamental basic and environmental medium based doctrine is revealed and examined Relying on a wide range of critics and practitioners as source material the author highlights not only the common threads of argument but also some shared conceptions of how the flaws might be corrected Two steps are recommended to secure the foundation first recognize the change in the nature of war and second develop an air and space doctrine which links the flexibility of their power to the military purposes inherent in modern warfare Military forces provide a nation s ability to compel coerce and deter adversaries and reassure and sustain allies This new foundation reveals the remarkable breadth of application for air and space power and is shown to have a strong relationship to joint doctrine the national security strategy and joint and Air Force strategic visions      **The Foundations of US Air Doctrine** Barry D. Grandstaff,1997 **The Foundations of U.S. Air Doctrine** Air University Press,U. S. Military,Department of Defense (DoD),Barry D. Watts,U. S. Air Force (USAF),2017-12-10 This study revolves around friction meaning the ubiquitous uncertainties and inescapable difficulties that form the atmosphere of real war More specifically it attempts to utilize the Clausewitzian concept of general friction as a basis for assessing and if necessary reshaping the foundations of US air doctrine This critical application of friction gives rise to four primary conclusions 1 The key assumptions underlying mainstream US doctrine for conventional air warfare have not evolved appreciably since Air Corps Tactical School ACTS theorists elaborated their theory of precision industrial bombardment during the 1930s 2 Judged by their essential premises and logic post Hiroshima theories of deterrence are little more than an updating for the nuclear age of ACTS bombardment doctrine 3 Both ACTS bombardment doctrine and deterrence theory appear fundamentally flawed insofar as they omit the frictional considerations that distinguish real war from war on paper 4 Reflection upon the extent to which friction pervades the elemental processes of actual combat suggests that the range of situations in which greater numbers or superior weapons guarantee victory is relatively limited even in the age of thermonuclear weapons the outcomes

of battles still turn more often than not on the character and intelligence of a few brave individuals The first step in giving substance to these claims is to explain what the central beliefs of US airmen traditionally have been The reader should be warned however that I have approached the writings on war of airmen like Major General Haywood S Hansell Jr and nuclear strategists like Bernard Brodie as well as those of Carl von Clausewitz himself from the perspective of two interrelated questions What overriding assumptions about war did these individuals embrace And what image of war as a total phenomenon is bound up in their assumptions In large part answering these questions is a matter of historical inquiry and to be candid I have been far less concerned with writing history for its own sake than with using the past to illuminate the problems of the present I therefore leave it to the reader to judge whether I have managed to do so without injuring the historical record
