Foundations Of Distributed Artificial Intelligence:

Foundations of Distributed Artificial Intelligence G. M. P. O'Hare, N. R. Jennings, 1996-04-05 Distributed Artificial Intelligence DAI is a dynamic area of research and this book is the first comprehensive truly integrated exposition of the discipline presenting influential contributions from leaders in the field Commences with a solid introduction to the theoretical and practical issues of DAI followed by a discussion of the core research topics communication coordination planning and how they are related to each other The third section describes a number of DAI testbeds illustrating particular strategies commissioned to provide software environments for building and experimenting with DAI systems The final segment contains contributions which consider DAI from different perspectives

Distributed Artificial Intelligence Satya Prakash Yadav, Dharmendra Prasad Mahato, Nguyen Thi Dieu Linh, 2020-12-17 Distributed Artificial Intelligence DAI came to existence as an approach for solving complex learning planning and decision making problems When we talk about decision making there may be some meta heuristic methods where the problem solving may resemble like operation research But exactly it is not related completely to management research The text examines representing and using organizational knowledge in DAI systems dynamics of computational ecosystems and communication free interactions among rational agents This publication takes a look at conflict resolution strategies for nonhierarchical distributed agents constraint directed negotiation of resource allocations and plans for multiple agents Topics included plan verification generation and execution negotiation operators representation network management problem and conflict resolution paradigms The manuscript elaborates on negotiating task decomposition and allocation using partial global planning and mechanisms for assessing nonlocal impact of local decisions in distributed planning The book will attract researchers and practitioners who are working in management and computer science and industry persons in need of a beginner to advanced understanding of the basic and advanced concepts

Distributed Artificial Intelligence for 5G/6G Communications Iacovos Ioannou, Prabagarane Nagaradjane, Vasos Vassiliou, Andreas Pitsillides, Christophoros Christoprou, 2024-12-24 The aim of this book is to delineate the challenges faced by new generation mobile networks such as 5G and forthcoming 6G and introduce the concept of addressing these challenges through the development of a novel Distributed AI DAI framework The book proposes a distributed AI approach to handle these complexities effectively Distributed Artificial Intelligence for 5G 6G Communications Frameworks with Machine Learning aims to provide a comprehensive understanding of the proposed DAI framework its architecture implementation and application in the context of D2D communication in 5G and beyond networks It showcases how the framework can enhance decision making control and communication performance while considering both static and dynamic network environments The book delves into the advantages of D2D communication highlighting how it transcends licensed frequency bands and bypasses the cellular network leading to improved network metrics such as spectral efficiency energy efficiency data rates and interference management It concludes by emphasizing that the DAI framework can offer enhanced network

control reduced signaling overhead and efficient decision making while capitalizing on existing implementations to tackle various challenges across the 5G and 6G landscape This book is intended for professionals that specialize in designing implementing and maintaining communication networks such as telecommunications communication engineers wireless engineers The book s emphasis on incorporating AI and ML techniques in the proposed framework also makes it of interest to computer and software engineers working in artificial intelligence and machine learning engineers

Socionics Klaus Fischer,Michael Florian,Thomas Malsch,2005-12-14 This book includes contributions from an interdisciplinary field of research we call Socionics Based on a close cooperation between sociologists and researchers from distributed artificial intelligence and multiagent systems Socionics deals with the exploration of the emergence and dynamics of artificial social systems agent societies as well as hybrid man machine societies The aim is both to develop intelligent computer technologies by picking up theoretical concepts and methods from sociology and to improve sociological models of societies and organizations by using advanced computer technology The 15 articles in this state of the art survey combine selected contributions from sociology and informatics on the modeling construction and study of complex social systems with special regard to the problem of scaling multiagent systems The discussion focuses on four specific research areas multi layer modeling organization and self organization emergence of social structures and paths from an agent centered to a communication centered perspective in modeling multiagent systems

Intelligent Agents for Telecommunications Applications Sahin Albayrak, 1998 Intelligent agent and distributed AI DAI approaches attach specific conditions to cooperative exchanges between intelligent systems that go far beyond simple functional interoperability Ideally systems that pursue local or global goals coordinate their actions share knowledge and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse grained systems The infrastructure of telecommunications is a world in transition There are a number of trends that contribute to this convergence of traditional telephony and data network worlds blurring of boundaries between public and private networks complementary evolution of wireline wireless and cable network infrastructures the emergence of integrated broadband multimedia networks and of course the information superhighway Up to now despite the effort that has gone into this area the field of intelligent agents research has not yet led to many fielded systems Telecommunications applications pose strong requirements to agents such as reliability real time performance openness security management and other integrated management and mobility In order to fulfil their promise intelligent agents need to be fully dependable and typically require an integrated set of capabilities This is the challenge that exists for intelligent agents technology in this application domain
