Foundations of Laser Spectroscopy Stig Stenholm, 2012-09-20 A simple presentation of the theoretical foundations of steady state laser spectroscopy this text helps students to apply theory to calculations with a systematic series of examples and exercises 1984 edition **Theoretical Foundations of Laser Spectroscopy** Stig Stenholm, 1978 *An Introduction to Laser Spectroscopy* David L. Andrews, Andrey A. Demidov, 2002-08-31 Remarkably sustained advances in the development of new lasers and their applications in spectroscopy have prompted this revised and expanded edition of the highly successful Introduction to Laser Spectroscopy first published in 1995 In the new edition the editors have preserved the basic concept and structure with the involvement of some new authors all recognized experts in laser spectroscopy Each chapter addresses a different technique providing a review and analysis of the current status and reporting some of the latest achievements With the key formulas and methods detailed in many sections this text represents a practicable handbook of its subject It will be a valuable tool both for specialists to keep abreast of developments and for newcomers to the field needing an accessible introduction to specific methods of laser spectroscopy and also as a resource for primary references The first two chapters lay out the technical details of the main laser systems now employed for spectroscopy and then the principles and applications of absorption and fluorescence measurements Following a description of Raman scattering the development of pump probe techniques is then traced The next chapters deal more specifically with applications of laser induced fluorescence first addressing diagnostics for biochemical systems and then applications to ordered systems The use of tunable infrared lasers for the spectroscopy of transient species is discussed in the next chapter followed by an introduction to optical nonlinearity focusing on its surface applications The utilisation of nonlinear optics for tunable ultraviolet generation is then described and the penultimate chapter gives a description of femtosecond laser ionisation applied in mass spectrometry The book concludes with a survey of the environmental applications of laser remote sensing **Laser Spectroscopy** Wolfgang Demtröder, 2013-06-29 Keeping abreast of the latest techniques and applications this new edition of the standard reference and graduate text on laser spectroscopy has been completely revised and expanded While the general concept is unchanged the new edition features a broad array of new material e.g frequency doubling in external cavities reliable cw parametric oscillators tunable narrow band UV sources more sensitive detection techniques tunable femtosecond and sub femtosecond lasers X ray region and the attosecond range control of atomic and molecular excitations frequency combs able to synchronize independent femtosecond lasers coherent matter waves and still more applications in chemical analysis medical diagnostics and engineering **Annual Report of the National Science Foundation** National Science Foundation (U.S.), **Information Sources in Physics** Dennis F. Shaw, 1994 This third edition includes two new chapters on quantum optics and physics of materials and eight of the other chapters have been completely rewritten by new authors All chapters have been revised and updated Patent coverage now includes European and international patents Theoretical
