Aspects of Face Processing H.D. Ellis, Malcolm Jeeves, Freda Newcombe, Andy Young, 1986-06-30 Proceedings of the NATO Advanced Research Workshop Aberdeen Scotland U K June 29 July 4 1985

Face Processing Graham Hole, Victoria Bourne, 2010-06-17 Face Processing seeks to answer questions such as how we recognise familiar faces and which factors determine facial attractiveness Drawing on a wealth of studies and research it is an essential companion for undergraduates studying face processing as part of a psychology degree

The Development of Face Processing in Infancy and Early Childhood Olivier Pascalis, Alan Slater, 2003 This book on face perception is one of the most researched areas in infancy and early childhood because of the enormous information that the face conveys to its viewer both in terms of the recognition of individuals and in the expressive information that faces convey It remains a complex area but a number of theoretical issues have emerged which motivate much of the current research This book describes many of these issues and also presents some empirical research findings to illustrate the ways in which researchers carry out their investigations

Handbook of Research on Face Processing A.W. Young, H.D. Ellis, 2013-10-22 The high degree of scientific interest in face processing is readily understandable since people's faces provide such a wealth of social information Moreover investigations have produced evidence of highly precocious face processing abilities in infants and of neural mechanisms in adults that seem to be differentially involved in face perception Such findings demonstrate that as one might expect the psychological importance of the face has clear biological underpinnings There are also urgent practical reasons for wanting to understand face processing The most extensively investigated of these involve forensic issues Other applications include the development of automated recognition systems for security and other purposes and understanding and rehabilitating disorders and impairments linked to brain injuries and psychiatric conditions Current studies of face processing are grouped in the volume into eleven topic areas For each area the editors approached an acknowledged authority and commissioned a review chapter summarising the findings that have been made These chapters were then circulated to other experts who were asked to write brief commentaries that developed theoretical or empirical points of importance to each area In this way a balanced coverage of each topic is achieved The book begins with a section examining the evidence suggesting that there may be something special about face processing This is followed by consideration of the face as a visual pattern Then there are four sections dealing with major uses of facial information followed by sections discussing the development of face processing abilities and the neural mechanisms involved The last three sections of the book deal with topics for which there are important practical applications for the studies reported

The Cognitive Neuroscience of Face Processing Nancy Kanwisher, Morris Moscovitch, 2000 This special issue showcases new findings from many investigators in this field in studies that use a wide range of experimental techniques including brain imaging ERPs patient studies and single unit recording in monkeys

Face Processing: Advanced Modeling and Methods Wenyi Zhao, Rama Chellappa, 2011-07-28 Major strides have

been made in face processing in the last ten years due to the fast growing need for security in various locations around the globe. A human eye can discern the details of a specific face with relative ease. It is this level of detail that researchers are striving to create with ever evolving computer technologies that will become our perfect mechanical eyes. The difficulty that confronts researchers stems from turning a 3D object into a 2D image. That subject is covered in depth from several different perspectives in this volume. *Face Processing: Advanced Modeling and Methods* begins with a comprehensive introductory chapter for those who are new to the field. A compendium of articles follows that is divided into three sections. The first covers basic aspects of face processing from human to computer. The second deals with face modeling from computational and physiological points of view. The third tackles the advanced methods which include illumination, pose, expression and more. Editors Zhao and Chellappa have compiled a concise and necessary text for industrial research scientists, students and professionals working in the area of image and signal processing. Contributions from over 35 leading experts in face detection, recognition and image processing. Over 150 informative images with 16 images in FULL COLOR illustrate and offer insight into the most up to date advanced face processing methods and techniques. Extensive detail makes this a need to own book for all involved with image and signal processing. *Face Processing* Markus Bindemann, Ahmed M. Megreya, 2017

Face processing is now a mainstream, multi-faceted and global research field in psychology and it is growing exponentially. The volume of emerging research necessitates continuous efforts to update our overall understanding of current theory. This book brings together contributions from face processing researchers around the world to provide up to date reviews of topics of great current interest. The book is partitioned to give insight into face processing systems such as those employed to verify a person's identity in applied security settings, the state of the art systems utilised for the construction of criminal facial composites in police investigations and the cognitive systems for the recognition of familiar faces and bodies. Disorders focusing on people with extremely high and extremely poor face processing ability as well as face processing in autism spectrum disorder and cultural differences including the development of perceptual and social race biases, the impact of cultural head-dress traditions and reading directions on face perception, cultural similarities and differences in the processing of facial expressions as well as a broader look at ethnicity, gender and age biases in face processing. The outcome is a book that provides diverse, interesting, useful and thought provoking chapters covering a range of topics of current theoretical and applied importance, authored by a combination of internationally renowned and exciting upcoming researchers. *Face Processing* Claus-Christian Carbon, 2003

Face Recognition Katherine B. Leeland, 2008. Face perception is the process by which the brain and mind understand and interpret the face, particularly the human face. The face is an important site for the identification of others and conveys significant social information. Probably because of the importance of its role in social interaction, psychological processes involved in face perception are known to be present from birth to be complex and to involve large and widely distributed areas in the brain. These parts of the brain can be damaged to cause a specific

impairment in understanding faces known as prosopagnosia This book presents the latest research in the field *The Role of Facial Movements in Face Processing and Its Development* Naiqi Xiao,2016 Our visual processing system is largely shaped by the environment in which we live Human faces as one of the most commonly seen stimuli exert unparalleled influence in our visual system and its development In the past half century researchers have extensively studied face processing which has greatly broadened our understandings of visual perception Most of these prior studies used static face images as experiment stimuli In the real world faces are mostly moving people smile talk and nod Prior studies reported unique contributions of facial movements in facilitating face recognition in infants and adults The underlying perceptual mechanisms for processing moving faces however are still unclear In particular our current understanding about face processing is limited to evidence from studies using static faces It is an open question as to whether our understanding about static face processing can help us understand face processing in the real world where faces are moving The current thesis specifically addresses this theoretically important question by examining the roles of facial movements in the development of face perception in infancy childhood adolescence and adulthood Results from Chapter 2 demonstrated that moving faces facilitated part based face processing in children adolescents and adults In the first year of life infants exhibited a left visual field bias in their face scanning pattern only for natural moving faces but not for artificial moving ones Chapter 3 Infants scanned moving faces differently from static ones Their scanning pattern for moving faces but not for static faces predicted their face discrimination performance Chapters 4 5 These studies consistently show crucial roles of facial movements in the development of face perception from infancy to adulthood My research has laid an important foundation for future studies to understand real world face processing and the underlying perceptual and neural mechanisms

Cognitive and Computational Aspects of Face Recognition Tim Valentine,2002-09-26 Just how and why we find some faces memorable but others impossible to recognize is a complex and important question with many practical applications This edited collection brings together a multi disciplinary team of researchers to compare and contrast their findings from psychology computer science mathematics and neural network research to present a state of the art description of the latest and best of their results in this field With an international line up of key researches this book is an resource for all researchers and advanced students of this topic in each discipline

Processing Images of Faces Vicki Bruce,1992 The human face poses a challenge to engineers computer scientists and psychologists alike This book integrates different contributions by combining detailed review articles with general overviews of the relationship between different kinds of research on faces and contemporary problems in vision and cognition Theoretical developments in this area are increasingly dependent on computer technology both because image processing techniques allow us to display and manipulate faces for experiments in ways that were not feasible with old photographic technology and because theoretical ideas can be expressed and tested more rigorously using computer simulation The psychological contributions in this volume illustrate current theoretical

developments that are heavily dependent on image processing and computer simulation As technology improves so it becomes increasingly feasible to automate many aspects of face processing normally taken for granted to develop new technological aids Therefore this volume also includes examples of computing developments for forensic purposes for the simulation of plastic surgery and for automatic animation for applications in telecommunications and creative arts Face Processing And Applications To Distance Learning Vuong Le,Usman Tariq,Hao Tang,Pooya Khorrami,Thomas S Huang,2016-03-30 This special compendium provides a concise and unified vision of facial image processing It addresses a collection of state of the art techniques covering the most important areas for facial biometrics and behavior analysis These techniques also converge to serve an emerging practical application of interactive distance learning Readers will get a broad picture of the fundamental science of the field and technical details that make the research interesting Moreover the intellectual investigation motivated by the demand of real life application will make this volume an inspiring read for current and prospective researchers and engineers in the fields of computer vision machine learning and image processing
