

## Diffusion processes with generators of generalized divergence form

By

Hirofumi OSADA

### § 0. Introduction.

In this paper we shall discuss a certain class of diffusion processes with singular coefficients. Our class contains the class of divergence form. Hence we call it generalized divergence form (G.D.F. in abbreviation).

G.D.F. have some applications to problems arising from fluid mechanics. Indeed, the Burgers process ([12]) and the vortex process are of generalized divergence form. Especially the vortex process is an example of generalized divergence form which is not of divergence form ([3], [11], [13]). Since the coefficients of these diffusion processes are singular, the construction is not easy. Our results are useful to construct such diffusion processes and also applicable for a homogenization problem ([8], [9]).

A differentiable operator  $A = \sum_{i,j=1}^n \nabla_i a_{ij} \nabla_j$ ,  $\nabla_i = \frac{\partial}{\partial x_i}$ , is said to be a divergence form if  $a_{ij}(t, x)$  are measurable functions satisfying

$$(0.1) \quad \lambda^{-1} |\xi|^2 \leq \sum_{i,j=1}^n a_{ij} \xi_i \xi_j, \quad \xi = (\xi_i)$$
$$|a_{ij}| \leq \mu.$$

Fundamental solutions of parabolic equations in a divergence form have been researched by many mathematicians. Especially important theoretical improvements were done by Nash [7] and Moser [6]. The most remarkable result was obtained by Aronson [1]. He showed the following estimate: Let  $p(s, x, t, y)$  be a fundamental solution of  $\nabla_t - A$ . Then

$$(0.2) \quad C_1 t^{-n/2} \exp[-C_1 |x-y|^2/(t-s)] \leq p(s, x, t, y)$$
$$\leq C_2 t^{-n/2} \exp[-C_2 |x-y|^2/(t-s)]$$

for all  $0 < t-s < \infty$ ,  $x, y \in R^n$ , where  $C_1, \dots, C_2$  are positive constants depending only on  $\lambda, \mu$  and  $n$ . It is one of our main purpose to show that (0.2) is also valid in the case of G.D.F..

Now we introduce a notion of generalized divergence form. Let  $a_{ij}(t, x)$ ,  $c_{ij}(t, x)$  ( $i, j=1, 2, \dots, n$ ) be measurable functions defined on  $[0, \infty) \times R^n$  and

**Generalized Diffusion Processes** Nikola Ivanovich Portenko, 1990-12-21 Diffusion processes serve as a mathematical model for the physical phenomenon of diffusion One of the most important problems in the theory of diffusion processes is the development of methods for constructing these processes from a given diffusion matrix and a given drift vector Focusing on the investigation of this problem this book is intended for specialists in the theory of random processes and its applications A generalized diffusion process that is a continuous Markov process for which the Kolmogorov local characteristics exist in the generalized sense can serve as a model for diffusion in a medium moving in a nonregular way The author constructs generalized diffusion processes under two assumptions first that the diffusion matrix is sufficiently regular and second that the drift vector is a function integrable to some power or is a generalized function of the type of the derivative of a measure

**Limit Theorems for Stochastic Processes** Jean Jacod, Albert Shiryaev, 2013-03-09 Initially the theory of convergence in law of stochastic processes was developed quite independently from the theory of martingales semimartingales and stochastic integrals Apart from a few exceptions essentially concerning diffusion processes it is only recently that the relation between the two theories has been thoroughly

studied The authors of this Grundlehren volume two of the international leaders in the field propose a systematic exposition of convergence in law for stochastic processes from the point of view of semimartingale theory with emphasis on results that are useful for mathematical theory and mathematical statistics This leads them to develop in detail some particularly useful parts of the general theory of stochastic processes such as martingale problems and absolute continuity or contiguity results The book contains an introduction to the theory of martingales and semimartingales random measures stochastic integrals Skorokhod topology etc as well as a large number of results which have never appeared in book form and some entirely new results The second edition contains some additions to the text and references Some parts are completely rewritten
