Frequency and Risk Analyses in Hydrology G. W. Kite,1977 *Frequency and Risk Analyses in Hydrology* Geoff W Kite,2019-05 Hydrology is the science through which man tries to understand the properties and the distribution of water Frequency analysis is a set of mathematical and statistical techniques used to describe the probability of occurrence of events Every year floods and droughts cause loss of life and millions of dollar s worth of damage in many countries of the world In many cases these consequences could be reduced either by nonstructural means such as restricting building in flood plains and by limiting water abstractions or by better design of regulatory structures to reduce flood peaks and increase low flows In all these cases the key is knowledge of the distribution of flows in the river Frequency and Risk Analyses in Hydrologydescribes some of the methods currently used to apply frequency analysis techniques to hydrological data in order to provide planners and engineers with figures that they can use in practice to reduce the losses caused by flood and drought Risk analysis is an extension of the technique used to assess the probability that the estimated design event will differ from the actual event *Hydrologic Frequency Modeling* Vijay Singh,1987-09-30 Floods constitute a persistent and serious problem throughout the United States and many other parts of the world They are respon sible for losses amounting to billions of dollars and scores of deaths annually Virtually all parts of the nation coastal mountainous and rural are affected by them Two aspects of the problem of flooding that have long been topics of scientific inquiry are flood frequency and risk analyses Many new even improved techniques have recently been developed for performing these analyses Nevertheless actual experience points out that the frequency of say a 100 year flood in lieu of being encountered on the average once in one hundred years may be as little as once in 25 years It is therefore appropriate to pause and ask where we are where we are going and where we ought to be going with regard to the technology of flood frequency and risk analyses One way to address these questions is to provide a forum where people from all quarters of the world can assemble discuss and share their experience and expertise pertaining to flood frequency and risk analyses This is what constituted the motivation for organizing the International Symposium on Flood Frequency and Risk Analyses held May 14 17 1986 at Louisiana State University Bat on Rouge Louisiana **Hydrology and Floodplain Analysis** Philip B. Bedient,Wayne Charles Huber,Baxter E. Vieux,2008 For undergraduate and graduate courses in Hydrology This text offers a clear and up to date presentation of fundamental concepts and design methods required to understand hydrology and floodplain analysis It addresses the computational emphasis of modern hydrology and provides a balanced approach to important applications in watershed analysis floodplain computation flood control urban hydrology stormwater design and computer modeling **Selected Water Resources Abstracts** ,1990 **Frequency and Climatology of Major Avalanches at Rogers Pass, 1909 to 1977** B.
