resolved marker loci called block extension is proposed It is very efficient and can be used for large pedigrees with a large number of markers especially for those data sets requiring few recombinants or recombination events A polynomial time exact algorithm for haplotype reconstruction without recombinants is also presented This algorithm first identifies all the necessary constraints based on the Mendelian law and the zero recombinant assumption and represents them using a system of linear equations over the cyclic group Z2 By using a simple method based on Gaussian elimination we could obtain all possible feasible haplotype configurations We have tested the block extension algorithm on simulated data generated on three pedigree structures The results show that the algorithm performs very well on both multi allelic and biallelic data especially when the number of recombinants is small     Middleware 2013 David Eyers,Karsten Schwan,2013-12-04 This book constitutes the refereed proceedings of the ACM IFIP USENIX 14th International Middleware Conference held in Beijing China in December 2013 The 24 revised full papers presented were carefully reviewed and selected from 189 submissions The papers cover a wide range of topics including design implementation deployment and evaluation of middleware for next generation platforms such as cloud computing social networks and large scale storage and distributed systems The middleware solutions introduced provide features such as availability efficiency scalability fault tolerance trustworthy operation and support security and privacy needs     **Graph Algorithms and Applications** ,2000     *Network Optimization Problems: Algorithms, Applications And Complexity* Ding-zhu Du,Panos M Pardalos,1993-04-27 In the past few decades there has been a large amount of work on algorithms for linear network flow problems special classes of network problems such as assignment problems linear and quadratic Steiner tree problem topology network design and nonconvex cost network flow problems Network optimization problems find numerous applications in transportation in communication network design in production and inventory planning in facilities location and allocation and in VLSI design The purpose of this book is to cover a spectrum of recent developments in network optimization problems from linear networks to general nonconvex network flow problems a     Proceedings of the 35th Annual ACM Symposium on the Theory of Computing ,2003
