Engineering , 1881 **Echo and Reverb** Peter Doyle, 2024-08-06 Winner of the Association for Recorded Sound Collections ARSC Award for Excellence in Historical Recorded Sound Research 2006 Echo and Reverb is the first history of acoustically imagined space in popular music recording The book documents how acoustic effects reverberation room ambience and echo have been used in recordings since the 1920s to create virtual sonic architectures and landscapes Author Peter Doyle traces the development of these acoustically created worlds from the ancient Greek myth of Echo and Narcissus to the dramatic acoustic architectures of the medieval cathedral the grand concert halls of the 19th century and those created by the humble parlor phonograph of the early 20th century and finally the revolutionary age of rock n roll Citing recordings ranging from Gene Austin s My Blue Heaven to Elvis Presley s Mystery Train Doyle illustrates how non musical sound constructs with all their rich and contradictory baggage became a central feature of recorded music The book traces various imagined worlds created with synthetic echo and reverb the heroic landscapes of the cowboy west the twilight shores of south sea islands the uncanny alleys of dark cityscapes the weird mindspaces of horror movies the private and collective spaces of teen experience and the funky juke joints of the mind *Educational Publication* North Carolina. Department of Public Instruction, 1923 **The Story Of The Sun, Moon, And Stars** Agnes Giberne, 2025-11-14 This edition has been fully restored with modern typesetting custom cover design The Story of the Sun Moon and Stars by Agnes Giberne is an engaging introduction to astronomy crafted to make the vast cosmos accessible to beginners without the need for complex mathematics With a preface by Charles Pritchard the book offers a simplified yet thorough exploration of celestial bodies inviting readers to appreciate the scientific beauty of the universe Giberne s narrative weaves together scientific facts with imaginative storytelling enabling a deeper connection to the wonders of the cosmos The book begins by challenging archaic beliefs that placed Earth at the center of the universe presenting it instead as a small part of a vast celestial family Through vivid descriptions and relatable analogies Giberne takes readers on a journey through the Solar System explaining the structure and dynamics that govern celestial motions She highlights how stars including our sun are luminous suns themselves while planets shine by reflecting sunlight fostering a sense of wonder about the intricate workings of the cosmos

Giberne delves into the formation of Earth and other celestial bodies illustrating how gaseous nebulae condense and rotate to form planets She explains the laws of attraction and motion using Saturn's rings as an example and explores humanity's historical fascination with the sun detailing its immense size and distance from Earth The book also covers early observations of sunspots and the sun's rotation reflecting humanity's enduring quest to understand the universe The focus shifts to Jupiter examining its atmospheric conditions striking cloud bands and powerful winds Giberne speculates on Jupiter's internal nature and contemplates the potential for life on its moons She describes the moon's characteristics their orbital periods and the unique astronomical phenomena they create inviting readers to reconsider their understanding of celestial bodies and their roles in the cosmos The narrative blends scientific observation with a sense of wonder highlighting the complex interactions between Jupiter and its satellites
