2.1 Highly combustible									
2.2 Combustible									
2.3 Dangerous when wet									
Corrosive substances									
2.1 Corrosive liquids									
2.2 Organic peroxides									
Toxic substances									
Corrosive substances									

Where substances display more than one hazard, with different storage segregation rules, the most onerous rule should be applied.

The table does not take into account materials of Class 7 (explosives), Class 6.2 (infectious), Class 7 (radioactive) and Class 7 (miscellaneous).

Goods of Class 7 may exhibit a variety of different hazards, whilst they generally may be stored with goods of other classes, they should be assessed on a material specific basis.

Lithium batteries of Class 9 have marks and label examples above should be protected from short-circuit and may need to be stored segregated from other goods.

The table provides generalised advice and you should always consult Safety Data Sheets (SDS) to identify incompatibilities between different substances and mixtures.

For example, acids should be segregated from oxidisers, hyperchlorides and organics.

An account is taken of incompatibilities between goods from the same class. For example, acids may require segregation from alcohols.

Solids should be stored above liquids. Only packages designed for stacking should be stacked on top of each other.

Combinations of these hazards should not be kept in the same building compartment or outdoor storage compound.

This relates to organic peroxides which should be stored in dedicated buildings, or if permitted, in secure fire resisting outdoor cabinets. They may also require temperature control.

Generally these hazards should be segregated from each other with the lower standard applying to gas cylinders stored outside.

Separation between these hazards may not be necessary but you should consult supplier's information, such as Safety Data Sheets (SDS) to confirm this.

Separate packages by at least 7 m in the store room or outside storage area. Non-dangerous goods in non-combustible packaging that present a low fire risk may be stored in the separation area.

Where non-liquefied flammable gases are concerned, the 1 m separation distance may be reduced to 1 m.
